

Product Requirements Document (PRD)

Team: User Growth & Community

Contributors: Manas Singh

Status: Brainstorming

Target Launch: September 2025

Problem Definition

1. What is the problem?

- Urban dwellers in metro cities often feel socially isolated despite access to events and venues.
- Barriers include difficulty finding solo-friendly plans, awkwardness of attending alone, safety concerns, and planning effort.

2. Who is facing the problem?

- Young professionals (22–35) who've relocated for work.
- Students/newcomers seeking community.
- Digital nomads or remote workers in cities.
- Singles looking for social, not romantic, weekend engagement.

3. What business value will this unlock?

- User acquisition through viral, FOMO-driven behavior.
- High engagement from habitual weekend use.
- Monetization via event partnerships, ticketing, subscriptions.
- Data value from interest/mood insights.

4. User Benefits

- Curated, low-pressure weekend plans.
- Meet like-minded peers without needing to organize.
- Feel socially connected, not lonely.
- Explore the city through new experiences.

5. Why now?

- Rise of the “social wellness” trend post-pandemic.
- Declining appeal of dating apps for platonic connections.
- Metro life continues to get lonelier despite growth.
- Gen Z and Millennials prioritize “experiences” over things.

Goals

Primary Objectives

Objective	Metric
Drive New User Growth	DAU/MAU growth in metros
Maximize Weekend Engagement	% of users who attend at least 1 event/weekend
Build Trust-First Community	NPS / Group Satisfaction Ratings
Monetize via Curated Events	Event ticket revenue / conversion rates

Functional Metrics

Metric	What It Measures	Why It Matters
RSVP Rate	% of users who RSVP for events	Indicates interest and intent
Show-Up Rate	% of RSVPs that attend	Validates social value and trust
Friend Connection Rate	# of connections added post-event	Tracks meaningful outcomes
Event Rating	Avg. user score per event	Quality control & host feedback
Repeat Users	% of users who attend 2+ weekends	Engagement and retention

Non-Functional Metrics

Metric	Target	Reason
App Uptime	99.9%	Essential for event-day access
RSVP Confirmation Time	< 2 seconds	Prevents drop-off
Group Assignment Latency	< 3 seconds	For dynamic group matching

Non-Goals

- Not a dating platform or match-making app.
- No ad-based monetization (focus on experiences).
- No long-term forums or discussion boards (keep temporal).
- Not a replacement for social networks.

User Personas & Validation

Persona	Age & Role	Need	How Weekenders Helps
Neetika	27, Consultant	Wants social weekend plans but hates planning	Gets curated options with new people
Mridul	23, New to city	Has no friends yet, wants to explore	Feels safe and welcomed in solo-friendly groups
Nishi	30, UX Designer	Loves food and art but not crowds	Can filter for mood-based, intimate experiences
Riya	25, Freelance Writer	Feels isolated on weekends	Builds a new circle through recurring weekend activities

Solution

1. Overview

Build a 'Weekenders' App for metro city residents to join curated group-based, solo-friendly weekend experiences—sorted by interest, mood, and location.

2. Key Features

- Curated Weekly Feed (updated Thursday–Saturday).
- Mood & Interest Tags ("Chill", "Adventurous", "Introspective", etc.).
- Peer Matching for activity groups.
- Verified Profiles with safety features.
- Host-Led Experiences (trained or rated hosts).
- Event RSVP, Waitlist, & Feedback Loop.
- Post-Event Social Graph (optional friend add, private messaging).

3. User Flow

- Onboarding Quiz (interests, vibe, comfort levels).
- View this weekend's lineup of events.
- RSVP → auto-matched into a group.
- Attend event → in-app check-in.
- Post-event feedback and connection suggestions.

4. User Benefits

- No awkward solo planning.
- Safe, friendly, interest-based meetups.
- Discover new people and places.
- Recurring habit of social exploration.

5. Business Benefits

- City-level virality through friend invites.
- Monetizable channels (premium events, subscription tiers).
- Highly engaged weekend user base.
- Strong UGC and referral potential.

6. Tech Considerations

- Backend for RSVP matching, host management, trust scoring.
- Location APIs to suggest nearest events.
- Push Notifications for event reminders, matches, check-ins.
- Scalable Group Chat (with time-limited availability).
- AI for Group Composition based on vibe/match history.

7. Key Success Metrics

- RSVP conversion rate
- Show-up rate
- Avg. events/user/month
- Group rating ($\geq 4.5/5$)
- Churn after 2 weekends
- % of users bringing a friend next week

Launch Plan

1. Pre-Launch

- Identify hosts, finalize onboarding.
- Build weekend event catalog.
- Test mood-based filtering and matching.
- Closed beta in Bangalore & Mumbai.

2. Launch Phase

- Launch in 3 cities with trained hosts.
- Social & in-app marketing push.
- Limited RSVP caps for exclusivity.
- Monitor NPS, event ratings, group size sweet spots.

3. Post-Launch

- Expand to 5 more metros.
- Introduce "**Mood Circles**" for recurring users.
- Offer paid premium events (rooftop brunches, getaways).
- Host loyalty program & city badges.

Risks & Mitigation

Risk	Mitigation
Low event show-up rate	Implement double-confirmation RSVP system and send reminders via push/SMS.
Safety complaints or incidents	Mandatory profile verification, trained hosts, and rapid-response support team.
Poor host quality	Rating-based host selection and monthly performance reviews.
Mismatch in group dynamics	AI-based vibe/mood matching and manual override by community ops.
RSVP abuse (spam sign-ups, last-minute dropouts)	Limit free event RSVPs, use deposit model for premium events.
Support overload post-events	Use chatbot-first support backed by FAQ and automated flows.

Host no-shows	Backup host system with alert escalation to local ops team.
Technical bugs on event day	Robust monitoring with emergency fallback UI for check-ins.
