TOO GOOD TO GO APP

–MANAS SINGH

About the company

Too Good To Go is a mobile application launched in Denmark in 2016 with the mission to combat food waste and promote sustainability. The app connects consumers with restaurants, bakeries, cafes, and grocery stores that have surplus, unsold food nearing the end of its shelf life. Instead of discarding perfectly edible food, businesses list “Magic Bags” of food on the app at significantly reduced prices. Users can browse local options, purchase a bag, and collect it during a designated time window. Each bag’s contents are a surprise, depending on what's left at the end of the day. Too Good To Go operates in numerous countries across Europe and North America, creating a win-win situation: customers enjoy affordable meals, businesses recover costs, and food waste is minimized. By turning waste into value, the platform raises awareness about food waste and empowers individuals to take small, meaningful actions for a more sustainable planet.

Business Model

Too Good To Go operates on a commission-based business model. Partner businesses list surplus food at discounted prices, and the app takes a small fee from each transaction. This creates value for all parties—businesses reduce waste and recover costs, users get affordable food, and Too Good To Go earns revenue while advancing its mission to fight food waste sustainably.

Market Landscape

Company Financials

- Revenue Growth: In 2023, Too Good To Go reported a revenue of DKK 544 million (approximately USD 78 million), achieving profitability with a net profit of DKK 15.7 million (~USD 2.2 million) .[Wikipedia](#)
- Estimated Revenue: Some estimates suggest the company's annual revenue could be as high as USD 581 million, though this figure may include broader operational metrics .[Growjo](#)
- User Base: As of 2023, the app has facilitated the saving of over 200 million meals, connecting more than 62 million users with 164,000 partner businesses .

Market Landscape

- Global Market Size: The food waste management market was valued at USD 69.8 billion in 2022 and is projected to reach USD 106.7 billion by 2030, growing at a CAGR of 5.4% .[Grand View Research](#)
- Upcycled Food Market: The market for upcycled foods, which includes products made from surplus or byproduct ingredients, is expected to grow from USD 53.7 billion in 2021 to approximately USD 97 billion by 2031 .[The Guardian](#)

Target User

Too Good To Go targets a diverse range of user segments, primarily focused on socially and environmentally conscious consumers. Key segments include:

1. Young Urban Professionals (Millennials & Gen Z)

- Tech-savvy, value sustainability, and open to new experiences.
- Often live in cities with easy access to partner businesses.
- Price-sensitive but quality-conscious, making discounted food appealing.

2. Students

- Budget-conscious and flexible with meal times and food variety.
- Open to surprise elements in meals (e.g., “Magic Bags”).

3. Eco-conscious Consumers

- Motivated by environmental impact rather than just savings.
- Actively seek to reduce food waste and support green initiatives.

4. Families and Households on a Budget

- Looking for affordable meal options.
- May use the app to supplement grocery needs.

5. Sustainability Advocates & Foodies

- Interested in local food options, discovering new places, and reducing waste.

The common thread is a desire for affordability, convenience, and sustainability.

User thoughts in India about this app.

Name	Demographics	Thoughts	Potential usage
Riya Sharma	24, Student, Lives in Delhi, Middle-class	“I love saving money and trying new food spots. If the app is reliable and hygienic, I’d definitely use it.”	Would regularly use the app to get affordable meals near her college.
Mayank Mehta	38, IT Professional, Lives in Bangalore, Upper-middle class	“I support sustainable ideas, but I’d want transparency in what I’m getting—especially for my family.”	May use the app occasionally, especially from trusted restaurants.
Reeta Singh	52, Homemaker, Lives in Lucknow, Budget-conscious	“I don’t like wasting food, but I worry about eating leftovers from outside. It must be clean and fresh.”	Unlikely to use unless educated on safety and benefits, might recommend to others.

User Journey

🌱 1. Onboarding / First-Time Use

- Install & Launch the app.
- Sign up / Log in via email or social accounts.
- Allow location access to show nearby stores and availability.
- Optional: Set preferences (e.g., dietary needs, favorite cuisines).

🔍 2. Discovery & Browsing

- Land on the Home Screen with a list or map of nearby stores.
- Use filters or search to narrow down by category, time, price, or favorites.
- See offers labeled as “Magic Bags” from:
 - Supermarkets
 - Bakeries
 - Cafés
 - Restaurants
 - Convenience stores

🛒 3. Selection & Purchase

- Tap into a listing to see:
 - Price (usually ~1/3 of original)
 - Pickup window (e.g., 6–9pm)
 - Surprise content type (no exact list, part of the charm)
 - Store location and reviews
- Tap “Reserve” and pay via the app.

4. Confirmation & Preparation

Receive a confirmation screen and email with:

Order details

Pickup time

Instructions to bring the app + bag

Countdown reminder and notifications before pickup.

5. Pickup

- Go to the store during the time window.
- Show the digital receipt on your app.
- Staff confirms and hands over the Magic Bag.

6. Post-Pickup / Feedback

- Rate the experience.
- Option to favorite the store for future deals.
- Encouraged to share on social or refer friends.
- App may prompt users to enable notifications or join campaigns.

7. Repeat Use

- Users receive alerts when:
 - Favorite stores post new bags
 - There are new nearby surprises
 - Limited-time campaigns run (e.g., Earth Day specials)
- The goal is to build a habit loop around discovery and pickup.

User Journey

We help shops and restaurants sell their unsold food

The user searches for a store, and the meal is prepaid via the app.

The user shows up at the store just before closing time to collect their meal.

The user shows their receipt and in return receives a bag or box of unsold food.

Similar brands in India.

1. Feeding India (by Zomato)

- Type: Non-profit initiative
- Focus: Food donation, not resale
- Model: Collects surplus food from restaurants and delivers to underprivileged communities

2. Robin Hood Army

- Type: Volunteer-driven NGO
- Focus: Rescuing surplus food to feed the hungry
- Model: No money involved; purely redistribution of food

3. Flashfood-style startups (Emerging concepts, no major players yet)

- Startups like NoWaste, Replate India, or small-city food apps are experimenting with surplus/ discounted food bags.

Key Learnings Indian Startups Can Take from TGTG

1. Gamify the Surprise Element

- TGTG's Magic Bags have a “loot box” vibe — users enjoy not knowing exactly what they’ll get.
-  Indian adaptation: “Mystery Thali” or “Surprise Combo Box” could be a hit with students and daily wage earners.

2. Geo-Based Real-Time Listings

- Users see offers around their current location and get push alerts when bags are live.
-  Learning: Indian apps can offer hyperlocal discovery — think of it as the “Swiggy Pop for surplus food.”

3. Build Sustainability Into the Brand Identity

- TGTG is framed not just as a cheap food app, but as a movement against food waste.
-  Learning: Position the product as a “climate positive” choice — appeals to younger Indians who care about causes.

4. Time-Sensitive Pickups

- The pickup window system creates urgency and optimizes logistics for restaurants.
-  Learning: Partner with vendors to push end-of-day discounted food instead of throwing it away — great for bakeries, cafés, food courts.

5. Simple, Trustworthy UX

- Minimalistic interface, clear pricing, and good store reviews build user confidence.
-  Learning: Avoid complexity. Keep the app lightweight, transparent, and mobile-friendly (especially for Tier 2/3 audiences).

6. Partner Diversity

- TGTG works with local bakeries and large supermarket chains like Carrefour and Pret.
-  Learning: Don’t restrict to restaurants — tie up with kirana stores, fruit/vegetable vendors, and even temple kitchens.

Recommendation: Let Users Choose the Quantity Tier of Magic Bags

Why This Matters

- Users vary widely in needs — from individuals to families or office groups.
- Lack of portion clarity may lead to:
 - Food waste (from oversized bags)
 - Dissatisfaction (if quantity is too little)
 - Missed opportunities (users unsure if it's “enough” for them)

🔧 Implementation Ideas

- Add a simple “Portion Size” dropdown in the seller flow (e.g., Solo / Duo / Group).
- Show size estimate on listings (e.g., "Feeds 1–2 people").
- Let users set default size preference in their profile (optional).

Tier	Description	Use Case
Duo	person meal or small family	Couples, roommates
Solo	1-person meal or snack	Students, individuals
Group	3+ servings or multi-item bag	Families, sharing at office

Recommendation: Introduce Explicit Vegetarian Labeling in Magic Bags

Why This Matters

- A significant portion of global users, including large segments in countries like India, the UK, and parts of Europe, follow vegetarian diets.
- Providing clear dietary indicators can:
 - Increase trust and repeat usage
 - Reduce food waste due to unclaimed or unusable bags
 - Enhance inclusivity and accessibility

✅ Recommendation

Introduce a simple, optional dietary tagging system for sellers to indicate if a Magic Bag is:

- ✅ Vegetarian
- 🌱 Vegan
- ❌ Contains Meat

🔧 Implementation Ideas

- Add a “Vegetarian-friendly” tag that vendors can opt into when listing a bag.
- Allow users to filter or favorite vegetarian/vegan options in the browse tab.
- Show dietary icons on listing cards (e.g., a green leaf for vegetarian).

Metrics

1. Magic Bags Sold (aka Meals Saved)

Why it matters:

This is TGTG's core impact metric — it quantifies the number of surplus food packages that were rescued from being wasted.

- Reflects progress on their mission to reduce food waste
- Strong correlation to revenue (TGTG takes a cut of each transaction)
- Easy to communicate publicly (e.g., "100 million meals saved globally")

2. Monthly Active Users (MAU) / Retention Rates

Why it matters:

TGTG thrives on repeat usage and habit loops — the more often people check and rescue bags, the more value the platform provides.

- Helps track user stickiness and how often users return
- Shows how well the app builds long-term behavior change
- Correlates with network effect strength — more demand leads to more supply

3. Bag Sell-Through Rate (Inventory Utilization)

Why it matters:

This is the % of listed Magic Bags that are actually sold before their pickup deadline.

- A key supply-side efficiency metric
- High sell-through = better vendor experience, less food waste
- Low sell-through = potential churn from partners due to unsold stock

TGTG needs to balance supply and demand carefully to avoid excess inventory or missed opportunities.

4. User & Partner Satisfaction (NPS / Reviews / Ratings)

Why it matters:

A two-sided platform must maintain strong satisfaction on both ends: users and partners.

- Customer ratings (post-pickup) reflect food quality, pickup experience, and value
- Partner satisfaction affects long-term retention and word-of-mouth growth
- High satisfaction drives organic growth and app store reviews

Bonus Metrics

1. Referral Conversions
2. Revenue per Bag
3. Pickup Window Fulfillment
4. CO₂ Saved (Impact Metric)
